

# MALAKOFF LIMITED

Malakoff Diving Services have been successfully providing subsea support to the Aquaculture sector for 20 years. Our dedicated Aquaculture Dive Teams located in Shetland and Orkney continue to deliver safe, efficient diving and topside support to our Clients in what continues to be a challenging, exciting and expanding sector.

## Cameras for Safety Intervention and Task Management

Containment Policies and the need for our clients to comply with the Marine Technical Standard for Scottish Fin Fish Aquaculture means we understand the importance of Visual and Written Reporting to assist our clients for audit purposes.

All of our Dive Teams use Hat mounted Cameras and through the use of our C-Technics Solo Boxes, we have the ability to be able to capture live video footage, audio and still images during the dive, allowing us to be able to relay our findings swiftly in situations where possible issues with fish health, mooring integrity, or cage issues require immediate remedial works. Our C-Technics boxes allow for onsite transfer of all inspections to USB so that we can distribute footage swiftly to Site Management, allowing for future planning. This ability to provide streamlined remedial solutions, this also enhances our quality management through real time task intervention and review of the works being carried out.
